四、閱讀測驗【請在下列各題中選出最適當的答案】

第一篇：

Class time at Southern Cross School in South Africa is an unusual scene. Teachers and pupils are not shut inside classrooms. Instead, they walk through the grass and bush, or sit in the shade of trees, and join serious discussions.

The school has the same syllabus that is set for the country's schools by the educational authorities, but the teaching methods are totally different. Southern Cross uses nature as a teaching tool. Classes go outdoors to look for

phenomena that can be used to study anything from mathematics and science to language. Jumbo Williams, the school's headmaster, emphasizes the importance of environmental care. "When students leave school, we want them to be champions of the natural environment," William said.

Today, the first lesson of the day is mathematics. To practice numbers, the children visit the nearby water trough to look at animal tracks and count how many different animals came to drink during the night. Language, speech, and debate classes focus on conservation issues. A recent student debate centered on whether people should give water to animals in the wild.

The idea for the school came from Sue Godding, who was the manager of a game lodge. She says that nature-based tourism is one of South Africa's national treasures. She believes that the country needs to produce people who understand the environment and the need to preserve it.

(1)51. How is Southern Cross School unusual?

- (1) Because the classes are outdoors.
- (2) Because the students are shut inside classrooms.
- (3) Because the teachers are tourists.
- (4) Because the school has a different syllabus.

(4)52. What is an important goal of Southern Cross School?

- (1) To help students get jobs as tour leaders.
- (2) To produce students who can work at a game lodge.
- (3) To foster skills in raising animals.
- (4) To develop students' love for nature.

(3)53. What does Sue Godding think is important for South Africa's future?

- (1) Producing new political leaders.
- (2) Changing the current syllabus set for its schools.
- (3) Promoting nature-based tourism.
- (4) Improving higher education.

(4)54. In which class do the students at Southern Cross School learn about nature?

- (1) only Mathematics.
- (2) only Science.
- (3) only Language.
- (4) All classes.

(2)55. Based on the passage, which of the following statements is **true** about Southern Cross School?

- (1) Its pupils study more subjects than children at other schools.
- (2) Its classes go outdoors in search for learning materials.
- (3) Its headmaster used to work as a manager of a game lodge.
- (4) Its teachers are trained educational authorities.

第二篇：

Forest fires can be beneficial for trees, soil, and animals. First, trees are the major beneficiaries. Many naturally occurring forest fires, often caused by lightning strikes, are surface fires that burn the understory – the shrubs and herbs from the forest – without damaging the trees in the overstory. In this way, the fire eliminates competition from the smaller trees, allowing the larger trees to flourish. Once the understory has been burned away, the forest is less likely to burn from high-temperature fires – the combined crown, surface, and ground fires that can do real damage to the tall trees. Burns are also a natural form of control for tree disease and insect pests.

Furthermore, forest fires can improve soil quality by converting the "litter" – dead leaves, twigs, and branches on the forest floor – to nutrient-rich soil. Normally, litter decomposes very slowly. However, fire releases the nutrients in the litter immediately. This creates an increase in the amount of phosphorus and potassium which are key elements that promote tree growth. The resulting rich soil encourages seed growth.

Additionally, forest fires can 'thin out' the forest so larger animals can live in the forest. Animals like deer and

moose, which need some open space to live, benefit from the thinning of the understory. As the enriched soil allows new herbs and shrubs to grow, there is new food for these animals as well.

(4)56. What would be the best title for this passage?

- (1) Forest Fires: Benefits and Risks
- (2) Trees, Soil, and Animals in Forests
- (3) Causes and Consequences of Forest Fires
- (4) Beneficial Effects of Forest Fires

(3)57. According to the passage, which of the following is **NOT** a benefit of forest fires to trees?

- (1) Burning the shrubs and herbs.
- (2) Reducing disease and pests.
- (3) Allowing all trees to flourish.
- (4) Decreasing the risk of bigger forest fires.

(1)58. How do forest fires promote soil quality?

- (1) By releasing the nutrients in the dead leaves, twigs, and branches.
- (2) Through eliminating phosphorus and potassium.
- (3) By damaging the trees in the overstory.
- (4) Through decomposing dead animals.

(2)59. How will animals benefit from forest fires?

- (1) Deer and moose will enrich the soil.
- (2) Bigger animals will have more room to live.
- (3) All animals will become thinner.
- (4) Smaller animals will feed on the new herbs and shrubs.

(4)60. What can be inferred from this passage about forests?

- (1) Forest animals always have enough food.
- (2) Thinning of the understory often causes high -temperature fires.
- (3) Tourist littering is a big problem.
- (4) Trees compete for space to grow.
